# Truong Phamvan

Java Software Engineer at MB - Military Bank - Ngân hàng Quân đội  
Hanoi

## Summary

I had been working as freelancer for almost a year before applying to a startup company. And after 2 years of working there I looked for a new job, and am currently developing software at a bank.

I have just worked on both Frontend and Backend projects in the past, however it is still mostly Backend. The languages I've worked with are React, PHP, Java, Oracle, and SQL database query language.

Currently I am working on developing microservices for the bank's partners integration using Java framework (Spring Boot). I can communicate in English and documentation writing as well at a decent level, in the field of Information Technology and others. More details about the projects that I have joined will be described exactly in my cv.
