Motivation of your choice, special skill, favorite department, appealing point etc.

- \*) I have worked in Japan company more than 3 years and acquired some working manners in Japan. I hope to enter the company in the mobile field and work as an iOS developer.
- \*) From friends and colleagues I am told that I am kind and diligent. I have a sense of responsibility and will do it until I complete my job. Also, I believe I can contribute with various ideas in my work.
- \*) Because I can speak both English and Japanese, I think it's also useful for business opportunities with foreign companies.

## ■ Job description

I worked at information technology companies for 5 years before coming to Japan. In addition to accumulating knowledge of IT, I also learned how to proceed with my work.

After graduation, I was worked as a system engineer in IT department of a Bank. My main job is to use ISAServer to secure the bank's network system. I also participated in the development of the bank's portal website.

After that, I worked as mobile developer at one game company and completed 2 Card games using both C ++ and Objective - C language. For game development, I learned a lot of knowledge to deal with online game applications. After that, I joined the freelancer project to build multimedia applications (with a lot of functions such as news, shops, social networks etc.)

The last project before came to Japan is the packet delivery application at one Singapore Offshore Software Company (Obj-c). After graduated from Japan Language School, I joined Oluxe Company and worked there until I left Japan. I was took charge of maintain and update one beauty salon management app (Objc-C) and building one more new beauty salon management app to use Machine Learning to analyse related to face and body ratio beside managing customer's information (Swift). In addition to develop mobile applications, I also took charge of database design.

I want to further study new things, I really would like to learn and contribute my knowledge of mobile development to engage in important mobile projects.

## ■ Career background

Time	Company Name - Affiliation Department
2011年7月～2013年9月	SOUTHEAST ASIA COMMERCIAL BANK JOINT STOCK VIETNAM BANK
2013年10月～2015年6月	TAMTAY GLOBAL JOINT STOCK VIETNAM COMPANY
2015年7月～2016年6月	JUPITECH SOLUTIONS OFFSHORE COMPANY
2017年11月～Present	OLUXE COMPANY

## Preferred language

【Programming Language】Objective-C、,Swift, C ++  
【Database】SQLite、 Realm

## ■ Good skill / field

· Development of games and applications with iOS

# Curriculum vitae

Name	Nguyen Huu Long

## ■ Self PR

I am confident in my strength and the ability to build steady efforts. Even if you do not get results immediately, you can continue your steady efforts.

After working for two years at the bank, I challenged my self at one game company as a mobile developer. When I joined this company, I had no experience coding with the framework (cocos 2 dx written in C ++ ) and I did not have any knowledge of how to play that kind of gambling cards. So, I did the following :

1. Using time to understand the construction code (working time and overtime work and weekend) → It usually takes 2 months to get used to work, but in my case I have only one month to participate in real project.
2. I also used daytime to understand the rules of game play. → Within a week I understood the rules and situations of the game I was able to quickly build the application and I understood the case further, so I could shorten the time to fix the error.
3. I frequently discussed programming code with my colleagues, proposed a variety of solutions and chose the best solution. → After the mobile project is released, I fully understand how to develop online games using the framework cocos 2dx and I'm confident enough to present this project before anyone .

Based on these experiences, I realize that the accumulation of small daily efforts is the key to achieving major goals. I hope to take advantage of this attitude. I will always be improving in your business. I would like to grow as a professional.
